

TECHNICAL ISSUES

June 5, 2018

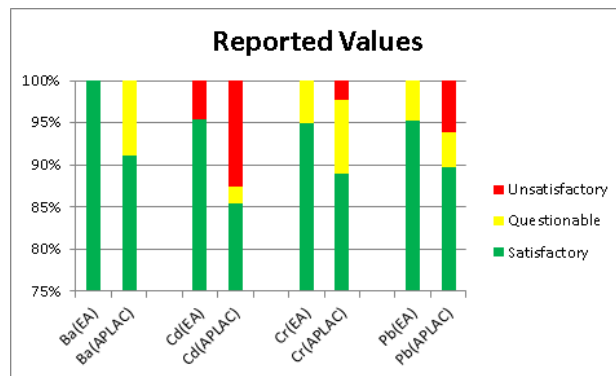

APLAC PTC meeting @Kyoto, Japan

Performance of Reported Values APLAC T098

- The ratio of satisfactory results looks a bit lower than EA's laboratories.

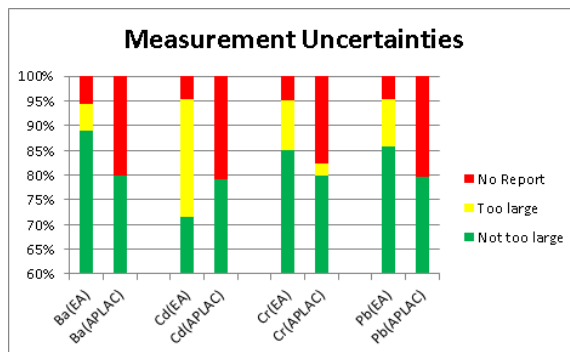

Performance of Uncertainty report APLAC T098

- 20% of the accredited laboratories in APLAC region failed to report the uncertainty.

Working Mode

- WG2 is kind to take up the analysis work.
- It is a big advantage of APLAC PTs.
- A new convener needs to be identified.
- An analysis is reported every year according to the performance, the MUs and other technical issues. Others may include the different methods in one specific PT, or the systematic issues throughout some PTs.
